

## Medicare Part B preferred drug list — Aetna Medicare Advantage plans that offer prescription drug coverage (MAPD)

Some medically administered Part B drugs may have extra requirements or limits on coverage. These may include step therapy. This is when you need to try certain preferred drugs first, before we cover another nonpreferred drug.

For example, drug A and drug B both treat your condition. We may prefer drug A and require you to try it first. If drug A does not work for you, we will then cover drug B. The listed preferred products should be used first. There is an exception process for specific cases that may call for a nonpreferred product.

See the list below for drug classes with preferred products. For specific times step therapy is needed, see the corresponding clinical policy bulletin on our website.
