Indications:
For the treatment of:
- Treatment of onychomycosis of the toenail or fingernail because of dermatophytes (tinea unguium) or Candida parapsilosis.

Authorization Guidelines:
For Patients who meet all of the following:
- Documentation of diagnosis of Onychomycosis
- Documentation of Onychomycosis in the presence of one of the listed comorbidities:
  - Diabetes (pharmacologically managed)
  - HIV infection
  - Immunosuppressed (patients receiving chemotherapy; continuous, long term oral steroids; continuous, long term azathioprine; agents for organ rejection)
  - Peripheral vascular disease documented by abnormal ABI* (e.g., Raynaud’s, Buerger’s, intermittent claudication, atherosclerosis, varicose veins, vasculitis)
  - Documentation of Pain (due to Onchomyosis)

* An ABI above 0.90 is normal; 0.70-0.90 indicates mild peripheral vascular disease; 0.50-0.70 indicates moderate disease; and less than 0.5 indicates severe peripheral vascular disease

Initial Approval:
- Fingernails: 250 mg once daily for 6 weeks.
  Toenails: 250 mg once daily for 12 weeks.
